## Office Action Summary

Application No.

10/777,648

Applicant(s)

CHEN, JAMES N.

Examiner

Xiuqin Sun

Art Unit

2863

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 12 February 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-19 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-19 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 12 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 02/12/2004.
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: \_\_\_\_\_.

## DETAILED ACTION

### *Specification*

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because of the following informality:

It contains informality legal phrases "comprising". Correction is required. See MPEP § 608.01(b).

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-5 and 7-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Zager et al. (U.S. Pat. No. 6393386).

With respect to claims 1 and 15:

Zager et al. teach a method and computer software that implements the method for monitoring a performance of a computing system (see Abstract), comprising: receiving data associated with monitoring performance of at least a portion of the computing device in accordance with a monitoring scheme (col. 5, lines 51-64; col. 13, lines 28-42; col. 16, lines 61-67; col. 17, lines 1-16 and col. 21, lines 11-22); detecting a pattern in the received data (col. 13, lines 44-50; col. 17, lines 65-67 and col. 18, lines 1-17); and autonomously adapting the monitoring scheme responsive to the detected pattern (col. 19, lines 51-55; col. 20, lines 56-67; col. 21, lines 1-9 and col. 32, lines 58-63).

With respect to claims 2-5 and 7-9:

The teaching of Zager et al. further includes: receiving data associated with monitoring performance of at least a portion of the computing device comprises receiving data associated with monitoring performance of a computing resource (col. 3, lines 22-47 and col. 5, lines 50-62); modifying the performance of the computing device

in light of a predicted behavior associated with the pattern (col. 3, lines 41-46; col. 14, lines 51-67 and col. 15, lines 1-33); and detecting an unknown pattern while autonomously testing the received data (col. 15, lines 64-67 and col. 16, lines 1-8); notifying a user of the detection of the unknown pattern (col. 15, lines 64-67 and col. 16, lines 1-8); wherein autonomously testing the received data comprises applying an expert system to the received data (col. 21, lines 26-58); wherein autonomously adapting the monitoring scheme comprises at least one of varying a frequency of sampling, varying a metric for the computing resource, and monitoring the performance of the computing device with respect to another computing resource (col. 34, lines 15-67 and col. 35, lines 1-17); modifying the performance of the computing device based on a predicted behavior associated with the pattern (col. 13, lines 51-55; col. 14, lines 51-67 and col. 15, lines 1-33); autonomously adapting the monitoring scheme responsive to detecting the unknown pattern (col. 15, lines 64-67 and col. 16, lines 1-8).

With respect to claim 10:

Zager et al. teach an apparatus for monitoring a performance of a computing device (see Abstract), comprising: an interface (col. 8, lines 22-41); a control unit communicatively coupled to the interface (col. 3, lines 22-47), the control unit adapted to: receive data over the interface, the data being associated with monitoring performance of at least a portion of the computing device in accordance with a monitoring scheme (col. 5, lines 51-64; col. 13, lines 28-42; col. 16, lines 61-67; col. 17, lines 1-16; and col. 21, lines 11-22); detect a pattern in the received data (col. 13, lines 44-50; col. 17, lines 65-67 and col. 18, lines 1-161); and adapt the monitoring scheme

Art Unit: 2863

responsive to detecting the pattern (col. 19, lines 51-55; col. 20, lines 56-67; col. 21, lines 1-9 and col. 32, lines 58-63).

With respect to claims 11-14 and 16-19:

The teaching of Zager et al. further includes: said control unit and software is adapted to receive data associated with monitoring performance of a computing resource (col. 3, lines 22-47); said control unit and software is further adapted to at least one of: establish the monitoring scheme (col. 3, lines 41-46; col. 14, lines 51-67 and col. 15, lines 1-33); modify the performance of the computing device in light of a predicted behavior associated with the pattern (col. 3, lines 41-46; col. 14, lines 51-67 and col. 15, lines 1-33); and detect an unknown pattern while autonomously testing the received data (col. 15, lines 64-67 and col. 16, lines 1-8); said control unit and software is further adapted to apply an expert system to the received data (col. 21, lines 26-58); said control unit and software is further adapted to at least one of vary a frequency of sampling, vary a metric for the computing resource, and monitor the performance of the computing device with respect to another computing resource (col. 34, lines 15-67 and col. 35, lines 1-17).

### ***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Zager et al. (U.S. Pat. No. 6393386) in view of Sampath et al. (U.S. Pat. No. 6892317).

Zager et al. teach the method that includes the subject matter discussed above. Zager et al. do not mention expressly: wherein applying the expert system comprises applying a fuzzy logic system.

Sampath et al. disclose a system and method for failure prediction, diagnosis and remediation of electronic devices in a distributed network, and teach the step and means of applying a fuzzy logic system to monitoring data acquired from a plurality of electronic devices (col. 6, lines 17-38).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the teaching of Sampath et al. in the invention of Zager et al. in order to perform prediction and/or diagnostic analysis of the monitoring data that can be as rudimentary as machine operational status to highly complex data that could indicate a particular component failure or be used for future failure prediction analysis, or for scheduling of routine maintenance (Sampath et al., col. 1, lines 33-65).

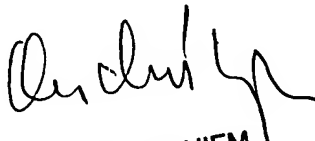

#### ***Contact Information***

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Xiuqin Sun whose telephone number is (571)272-2280. The examiner can normally be reached on 6:30am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Barlow can be reached on (571)272-2269. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
